

# All About Sharks: Great Whites, Tiger Sharks, Bull Sharks, Hammerheads and More

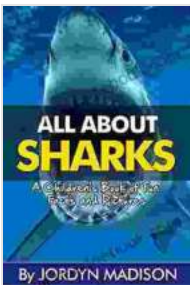

Sharks are fascinating creatures that have been around for millions of years. They come in all shapes and sizes, and can be found in all oceans of the world. Sharks are apex predators, meaning that they are at the top of the food chain. They play an important role in the marine ecosystem by keeping populations of other animals in check.

There are over 500 species of sharks in the world. Some of the most common types of sharks include:

- **Great white sharks** are one of the most well-known types of sharks. They are large, powerful predators that can grow up to 20 feet long. Great white sharks are found in all oceans of the world, but they are most common in coastal waters.
- **Tiger sharks** are another large, powerful type of shark. They are named for their distinctive tiger-like stripes. Tiger sharks are found in all warm oceans of the world. They are known to be scavengers, and they will eat anything they can find.
- **Bull sharks** are a type of shark that is found in both salt and fresh water. They are known for their aggressive behavior and their ability to survive in a wide range of habitats. Bull sharks are found in all oceans of the world, but they are most common in coastal waters.
- **Hammerhead sharks** are a type of shark that is known for its distinctive hammer-shaped head. Hammerhead sharks are found in all

warm oceans of the world. They are known to be predators of fish, rays, and other sharks.

Sharks are often feared by humans, but they are not as dangerous as you might think. In fact, only a small number of shark species are known to attack humans. Most sharks are more afraid of humans than we are of them.
